1. Competitive Intelligence Deep-Dive

This section breaks down exactly what your two main competitors are doing right, where they are vulnerable, and how Metaborong can exploit those gaps.

1.1 Domain Authority & Traffic Comparison

Metric	Metaborong	SoluLab	Antier Solutions
Authority Score	2	34	35
Organic Traffic (monthly)	n/a	3,300 (-52%)	7,900 (-26%)
Organic Keywords	n/a	8,000	8,200
Backlinks (total)	181	111,300	240,500
Referring Domains	87	6,200	5,600
Paid Traffic	n/a	0	261
Traffic Share (US)	n/a	27%	28%
AI Visibility Score	0	18	21
AI Search Mentions	0	254	355
Cited Pages	0	727	1,400

1.2 Keyword Strategy Analysis

Both competitors derive roughly 75% of their traffic from informational queries and about 20% from commercial queries. Here is a breakdown of their keyword intent distribution:

Intent Type	SoluLab Keywords	SoluLab Traffic	Antier Keywords	Antier Traffic
Informational	4,000 (75.5%)	691	3,000 (74.8%)	545
Commercial	1,100 (21.6%)	188	760 (19.2%)	176
Navigational	72 (1.4%)	348	120 (3%)	161
Transactional	77 (1.5%)	44	114 (2.9%)	3

1.3 Top Ranking Keywords (Competitor Insights)

These are the highest-traffic keywords your competitors rank for. This reveals exactly which topics and service pages drive their business.

SoluLab Top Keywords:

Keyword	Position	Volume	CPC (USD)	Traffic
solulab (branded)	1	320	\$9.24	23.63

web3 development company	Varies	720	\$44.05	5.44
defi exchange development company	1	170	\$0.00	3.87
defi insurance nexusmutual.io	Varies	1,300	\$0.00	3.87
solu lab (branded)	1	50	\$0.00	3.69

Antier Solutions Top Keywords:

Keyword	Position	Volume	CPC (USD)	Traffic
antier (branded)	1	880	\$0.00	14.79
no kyc crypto wallet	Varies	390	\$4.99	2.93
ico development	2	170	\$0.00	2.80
base chain	Varies	1,000	\$3.59	2.80
antier solutions (branded)	2	140	\$10.05	2.29

1.4 Backlink Profile Analysis

Backlink Metric	Metaborong	SoluLab	Antier
Total Backlinks	181	111,300	240,500
Referring Domains	87	6,200	5,600
Follow vs Nofollow	104 / 77	48,000+ / 48,000+	102,490 / rest nofollow
Text Links	167 (92%)	104,700 (96%)	210,000 (88%)
Image Links	14 (8%)	4,600 (4%)	27,200 (11%)
Top Referring Domain	lypp.com (42)	prendergast.net (14,819)	demcra.com (26,679)

1.5 Competitive Gaps & Opportunities

After analyzing both competitors, here are the key opportunities for Metaborong:

Gap 1: AI Agents in Web3 (Zero Competition)

Neither SoluLab nor Antier has meaningful content around AI agents for blockchain/Web3. This is a fast-growing niche with low keyword difficulty. Metaborong should own this space from day one.

Gap 2: Both Competitors Are Declining

SoluLab organic traffic is down 52% and Antier is down 26%. Their content is aging and they are not keeping pace with Google algorithm updates. This creates a window to capture their lost traffic.

Gap 3: Commercial Intent Keywords Are Underserved

Only about 20% of competitor keywords target commercial intent. The development services keywords (DeFi exchange development, Web3 consulting, crypto wallet development) have high CPC values, meaning buyers are actively searching. These are your money keywords.

Gap 4: AI Search Visibility Is Wide Open

With AI Overviews appearing in only 0.2-1.7% of competitor SERP results, there is a massive opportunity to structure content for AI citation. This is the next frontier of SEO.

2. Technical SEO Foundation (Phase 1 Priority)

This is the work your internal team should complete in Months 1-2. Nothing else matters if the technical foundation is broken. Complete these items in the order listed.

2.1 Crawlability & Indexation

1. Set up Google Search Console and Bing Webmaster Tools immediately. Verify ownership via DNS TXT record (most reliable method).
2. Install Google Analytics 4 with enhanced measurement enabled. Set up conversion events for contact form submissions, demo requests, and newsletter signups.
3. Create and submit an XML sitemap at metaborong.com/sitemap.xml. Include all service pages, blog posts, and key landing pages. Exclude admin pages, tag archives, and thin content pages.
4. Configure robots.txt to allow full crawling of content directories. Block `/admin/`, `/wp-admin/`, `/api/`, and any staging environments. Place sitemap reference in robots.txt.
5. Implement canonical tags on every page pointing to the preferred URL version (<https://www.metaborong.com/> or <https://metaborong.com/> — pick one and enforce it).
6. Set up 301 redirects from http to https and from non-www to www (or vice versa). All four URL variations must resolve to one.

2.2 Site Speed & Core Web Vitals

Core Web Vital	Target	How to Fix
Largest Contentful Paint (LCP)	Under 2.5 seconds	Optimize hero images (WebP format), implement CDN, preload critical fonts
First Input Delay (FID) / INP	Under 200ms	Minimize JavaScript bundles, defer non-critical scripts, remove unused CSS
Cumulative Layout Shift (CLS)	Under 0.1	Set explicit width/height on images and embeds, avoid injecting content above the fold

Additional speed optimizations your team should implement:

- Enable GZIP or Brotli compression on the server
- Implement browser caching with cache-control headers (minimum 1 year for static assets)
- Lazy-load all images below the fold
- Minify CSS, JavaScript, and HTML
- Use a CDN (Cloudflare free tier is sufficient to start) with edge locations in US and Europe
- Compress all images to WebP format, keep hero images under 200KB

2.3 Mobile Optimization

Google uses mobile-first indexing, meaning your mobile site IS your primary site for ranking purposes.

- Ensure fully responsive design at all breakpoints (320px, 768px, 1024px, 1440px)
- Tap targets must be minimum 48x48 pixels with adequate spacing
- Font sizes minimum 16px for body text on mobile
- No horizontal scrolling on any page at any viewport width
- Test every page with Google Mobile-Friendly Test tool

2.4 Structured Data & Schema Markup

Implement the following JSON-LD schema types across the site. This is critical for rich snippets and AI search visibility.

Schema Type	Where to Implement	Purpose
Organization	Homepage, About page	Establishes brand entity, shows in Knowledge Panel
WebSite + SearchAction	Homepage	Enables sitelinks searchbox in Google
Service	Each service page	Marks up DeFi, Web3, AI Agent services with descriptions and pricing range
FAQPage	Service pages, blog posts	Triggers FAQ rich snippets (huge CTR boost)
Article / BlogPosting	Every blog post	Enables article rich results with date, author, image
BreadcrumbList	All pages	Shows breadcrumb path in search results
HowTo	Tutorial blog posts	Step-by-step rich results for development guides
LocalBusiness (if applicable)	Contact page	If you have a physical office, adds map pack visibility

2.5 Site Architecture & URL Structure

Your site needs a flat, logical architecture that search engines can crawl efficiently. Every important page should be reachable within 3 clicks from the homepage.

Recommended URL Structure:

Page Type	URL Pattern	Example
Homepage	/	metaborong.com/
Service Category	/services/[category]/	metaborong.com/services/defi-development/
Individual Service	/services/[category]/[service]/	metaborong.com/services/defi-development/dex-development/

Blog Hub	/blog/	metaborong.com/blog/
Blog Post	/blog/[slug]/	metaborong.com/blog/how-to-build-defi-protocol/
Case Study	/case-studies/[slug]/	metaborong.com/case-studies/defi-lending-platform/
About	/about/	metaborong.com/about/
Contact	/contact/	metaborong.com/contact/

2.6 Internal Linking Strategy

Internal links distribute page authority and help Google understand your site hierarchy. Follow these rules:

- Every blog post must link to at least 2 service pages using keyword-rich anchor text
- Every service page must link to 3-5 related blog posts
- Create a pillar/cluster model: one main pillar page per service category, supported by 8-12 cluster blog posts that link back to the pillar
- Add contextual internal links within the first 200 words of every page where possible
- Use breadcrumbs on every page (this also serves as internal linking)
- Add a related posts section at the bottom of every blog post (3-4 related articles)

3. On-Page SEO Strategy

3.1 Service Pages to Create

Based on competitor keyword analysis, these are the service pages you need. Each page should be 1,500-2,500 words, include FAQPage schema, and target both the primary keyword and 3-5 related long-tail variations.

Service Page	Primary Keyword Target	Monthly Search Volume	Competition Level
DeFi Development Services	defi development company	390	Medium
DeFi Exchange (DEX) Development	defi exchange development	170	Medium
DeFi Lending & Borrowing Platform	defi lending platform development	140	Low
DeFi Yield Farming Development	yield farming development	110	Low
Web3 Consulting Services	web3 consulting	320	Medium
Web3 Development Company	web3 development company	720	High
Blockchain Consulting	blockchain consulting services	210	Medium
AI Agent Development for Web3	ai agent development	480	Low
AI Agents for DeFi	ai agents defi	90	Very Low
AI-Powered Smart Contract Auditing	ai smart contract audit	70	Very Low
Crypto Wallet Development	crypto wallet development	260	Medium
Token Development Services	token development company	170	Medium

3.2 On-Page Optimization Checklist

Apply this to every service page and blog post:

Element	Specification	Example
Title Tag	Primary keyword + brand, 50-60 characters	DeFi Development Services Metaborong
Meta Description	Include keyword + CTA, 150-160 characters	Build secure DeFi protocols with Metaborong. Custom DEX, lending, and yield farming solutions. Get a free consultation.

H1 Tag	One per page, contains primary keyword	DeFi Development Services
H2 Tags	3-6 per page, use related keywords	Why Choose Custom DeFi Development?
H3 Tags	Under each H2 for subtopics	Smart Contract Security Features
URL Slug	Short, keyword-rich, lowercase, hyphens only	/services/defi-development/
First 100 Words	Include primary keyword naturally	Mention DeFi development within first paragraph
Image Alt Text	Descriptive, include keyword where natural	DeFi exchange development architecture diagram
Internal Links	2-5 contextual links to related pages	Link to DEX development, wallet development pages
CTA	One primary CTA per page + floating CTA	Schedule a Free DeFi Consultation

3.3 Content Structure for Service Pages

Each service page should follow this proven structure that both ranks well and converts visitors:

1. Hero Section: Headline (H1 with keyword), subheadline explaining value, primary CTA button, trust indicators (clients served, years in business)
2. Problem/Pain Points: Address the specific challenges your target audience faces (why they need this service)
3. Service Overview: Detailed explanation of what you offer, how you do it, your tech stack
4. Key Features & Benefits: Use icon cards or a comparison table; include differentiators vs competitors
5. Development Process: Step-by-step timeline showing how you work (great for HowTo schema)
6. Case Studies / Portfolio: Showcase 2-3 relevant projects (creates E-E-A-T signals)
7. FAQ Section: 6-10 questions with concise answers (triggers FAQ rich snippets)
8. Related Services: Link to related service pages (internal linking)
9. Final CTA: Contact form or consultation booking with urgency element

4. Content & Blog Strategy

4.1 Content Pillar Model

Organize your content into three pillar topics, each supported by cluster blog posts that interlink:

Pillar Topic	Pillar Page URL	Number of Clusters	Cluster Examples
DeFi Development	/services/defi-development/	10-12 posts	DEX development guide, DeFi lending explained, yield farming tutorial, DeFi security best practices
Web3 Consulting & Strategy	/services/web3-consulting/	8-10 posts	Web3 migration guide, blockchain for enterprises, tokenomics design, DAO governance models
AI Agents in Web3	/services/ai-agents-web3/	8-10 posts	AI trading agents, AI for DeFi automation, smart contract AI audit, AI-powered governance

4.2 Blog Posting Calendar — Month 1-2 (Foundation Phase)

During the foundation phase, your internal team should publish 2 posts per week. Focus on low-competition, high-intent topics first.

Month 1 — Weeks 1-4:

Week	Post Title	Target Keyword	Volume	Intent	Word Count
W1	What Is DeFi Development? A Complete Guide for 2026	defi development	720	Informational	2,500
W1	How to Choose a Web3 Development Partner	web3 development company	720	Commercial	2,000
W2	Top 10 DeFi Protocols You Should Know About	top defi protocols	590	Informational	2,500
W2	AI Agents in DeFi: The Future of Automated Trading	ai agents defi	90	Informational	2,000
W3	How to Build a Decentralized Exchange (DEX) in 2026	how to build a dex	260	Informational	3,000
W3	Web3 Consulting: What It Is and Why Your Business Needs It	web3 consulting	320	Commercial	2,000
W4	DeFi Yield Farming Explained: Risks, Rewards, and How It Works	yield farming explained	480	Informational	2,500
W4	How AI Agents Are Revolutionizing Smart Contract Audits	ai smart contract audit	70	Informational	2,000

Month 2 — Weeks 5-8:

Week	Post Title	Target Keyword	Volume	Intent	Word Count
W5	DeFi Lending Platform Development: Technical Architecture Guide	defi lending platform development	140	Commercial	3,000
W5	What Are AI Trading Agents? How They Work on Blockchain	ai trading agents blockchain	110	Informational	2,000
W6	Token Development Guide: ERC-20, BEP-20, and Beyond	token development	390	Informational	2,500
W6	Blockchain Consulting Services: What to Expect and How to Prepare	blockchain consulting services	210	Commercial	2,000
W7	Cross-Chain DeFi Development: Bridging Multiple Blockchains	cross-chain defi	170	Informational	2,500
W7	Building an AI-Powered DAO: Governance Meets Automation	ai dao governance	50	Informational	2,000
W8	Crypto Wallet Development: Features, Security, and Costs	crypto wallet development	260	Commercial	2,500
W8	The Enterprise Guide to Web3 Adoption Strategy	enterprise web3 strategy	90	Commercial	2,500

4.3 Blog Posting Calendar — Month 3-6 (Growth Phase, with SEO Expert)

Once the SEO expert joins, increase publishing to 3 posts per week and add guest posting, link building, and more competitive keywords.

Month	Posts/Week	Focus	Key Topics to Cover
Month 3	3	Medium-competition commercial keywords	DeFi development cost guide, Web3 vs Web2 comparison, AI agent use cases in finance
Month 4	3	Comparative and versus content	Metaborong vs SoluLab, DEX vs CEX, which blockchain for DeFi, AI agents vs bots
Month 5	3	Industry reports and data-driven content	State of DeFi 2026 report, Web3 adoption trends, AI agents market size
Month 6	3	Case studies and thought leadership	Client case studies (anonymized if needed), conference recaps, expert interviews

5. Phased Implementation Roadmap

Phase 1: Foundation (Months 1-2) — Internal Team

Goal: Fix all technical SEO issues, create core service pages, begin content publishing, establish tracking.

Week	Task Category	Specific Tasks	Owner
Week 1	Technical Setup	Google Search Console setup, GA4 installation, XML sitemap creation and submission, robots.txt configuration	Internal Dev
Week 1	Technical SEO	SSL verification, canonical tags, 301 redirect setup (http>https, www consistency), fix any crawl errors	Internal Dev
Week 2	Site Speed	Image optimization (WebP conversion), enable compression, CDN setup (Cloudflare), minify CSS/JS, lazy loading	Internal Dev
Week 2	Schema Markup	Implement Organization, WebSite, BreadcrumbList, and Service schema on existing pages	Internal Dev
Week 3-4	Service Pages	Create first 6 service pages: DeFi Development, DEX Development, Web3 Consulting, AI Agent Development, Blockchain Consulting, Crypto Wallet Development	Content + Dev
Week 3-4	On-Page SEO	Optimize all existing pages: title tags, meta descriptions, H1-H3 hierarchy, image alt text, internal links	Content Team
Week 5-6	Content Launch	Publish first 4 blog posts (Week 1-2 calendar), add FAQPage schema to service pages and posts	Content Team
Week 5-6	Service Pages	Create remaining 6 service pages: DeFi Lending, Yield Farming, AI DeFi Agents, AI Smart Contract Audit, Token Development, Web3 Development	Content + Dev
Week 7-8	Content	Publish next 4 blog posts (Week 3-4 calendar), implement pillar-cluster internal linking model	Content Team
Week 7-8	Technical Audit	Run full site audit (Screaming Frog or Ahrefs), fix broken links, resolve any 404 errors, check mobile usability	Internal Dev

Phase 2: Growth (Months 3-4) — SEO Expert Joins

Goal: Scale content production, begin link building, optimize based on data, target medium-competition keywords.

Task Category	Specific Tasks	Expected Impact
---------------	----------------	-----------------

Content Scaling	Increase to 3 posts/week, add comparison and versus content, create downloadable resources (DeFi security checklist, Web3 readiness assessment)	Broader keyword coverage, lead magnets for email list building
Link Building	Launch outreach campaign: target Web3 blogs, crypto news sites, DeFi directories. Aim for 10-15 quality backlinks/month. Submit to blockchain development directories.	Domain authority growth from 2 toward 10-15
Technical Refinement	Advanced schema (HowTo, FAQ on all content), page speed optimization round 2, fix any newly discovered crawl issues	Improved rich snippet visibility, better Core Web Vitals scores
AI Search Optimization	Structure content for AI citation: clear definitions, data tables, concise answers. Add structured data. Ensure content answers questions directly in first paragraph.	Start appearing in AI Overviews and chatbot citations
Analytics & Optimization	Set up rank tracking for top 50 target keywords, identify quick wins (keywords ranking 11-20), optimize those pages first	Fast ranking improvements on near-ranking pages
Local SEO (if applicable)	Google Business Profile setup, local schema, NAP consistency across directories	Map pack visibility for US/Europe searches

Phase 3: Acceleration (Months 5-6)

Goal: Build authority, create linkable assets, expand into competitive keywords, establish industry thought leadership.

Task Category	Specific Tasks	Expected Impact
Authority Content	Publish original research: State of DeFi 2026 report, AI Agents in Web3 survey, Web3 Adoption Trends whitepaper. These become linkable assets.	Natural backlinks from industry citations, press coverage
Guest Posting	Publish 2-4 guest posts per month on Cointelegraph, Decrypt, Blockworks, Medium crypto publications	Referral traffic + high-authority backlinks
Competitor Gap Capture	Target SoluLab and Antier declining keywords. They have lost 52% and 26% traffic respectively. Create better content for their dropping pages.	Capture competitor lost traffic
Case Study Series	Publish 4-6 detailed case studies with technical depth, results data, and client testimonials	E-E-A-T signals, commercial conversion content
Video Content	Create YouTube tutorials for top-performing blog posts. Embed on site. Transcripts become additional SEO content.	Video SERP presence, increased time on site

Phase 4: Dominance (Months 7-12)

Goal: Compete directly for high-competition head terms, build brand search volume, and establish Metaborong as a recognized name in the space.

- Target head terms: web3 development company, defi development company, blockchain development services
- Build programmatic SEO pages: individual pages for DeFi development on each chain (Ethereum, Solana, Base, Arbitrum, etc.)
- Launch Metaborong blog newsletter to build direct audience
- Speaker opportunities at ETHDenver, Consensus, Devcon for brand signals
- PR campaign for original research content to build branded search volume
- Target authority score of 20+ by month 12

6. KPI Targets & Measurement Framework

KPI	Current	Month 3 Target	Month 6 Target	Month 12 Target
Authority Score	2	8-10	15-18	22-28
Organic Traffic (monthly)	0	200-500	1,500-3,000	5,000-8,000
Organic Keywords Ranking	0	100-200	500-1,000	2,000-3,500
Referring Domains	87	120-150	250-400	600-1,000
Blog Posts Published	0 (strategy)	16	40+	90+
Service Pages Live	Unknown	12	12 (optimized)	15-20
Keywords in Top 10	0	5-15	30-60	100-200
AI Search Mentions	0	5-10	30-50	100+
Core Web Vitals	Unknown	All Green	All Green	All Green

7. Hiring the Right SEO Expert (Month 3 Onward)

When you hire an SEO expert to take over after the foundation phase, here is what to look for and what to hand off:

7.1 Required Skills

- Technical SEO experience with JavaScript-heavy sites (common in Web3)
- Link building experience in the crypto/blockchain/fintech niche
- Familiarity with SEMrush, Ahrefs, or similar tools for keyword tracking and competitive analysis
- Content strategy experience with B2B technology companies
- Understanding of E-E-A-T principles and how to build topical authority
- Experience with programmatic SEO (for scaling service pages)

7.2 Handoff Checklist

Give your SEO expert these items on day one:

1. This strategy document with all competitive data
2. Google Search Console and GA4 access
3. SEMrush or Ahrefs account access
4. Content publishing access (CMS login)
5. List of all service pages with target keywords
6. Blog editorial calendar and published post tracker
7. Technical audit results from end of Phase 1
8. Current rank tracking data for target keywords

8. Quick Wins (Do This Week)

These are the highest-impact, lowest-effort tasks. Do them immediately:

Priority	Action	Time Required	Impact
1	Set up Google Search Console + submit sitemap	30 minutes	Critical — enables indexing and monitoring
2	Install GA4 with conversion tracking	1 hour	Critical — you need data to make decisions
3	Fix robots.txt and canonical tags	1 hour	High — prevents duplicate content and crawl waste
4	Add Organization schema to homepage	30 minutes	High — establishes brand entity for Google
5	Optimize title tags and meta descriptions for all existing pages	2 hours	High — immediate CTR improvement in search results
6	Create and publish the AI Agents in Web3 pillar page	1 day	High — first-mover advantage on low-competition topic
7	Compress all images to WebP, enable lazy loading	2 hours	Medium — page speed improvement
8	Set up Cloudflare CDN (free tier)	1 hour	Medium — global speed improvement for US + Europe

End of SEO Strategy Document

Prepared for Metaborong — March 2026
